CHINA'S CCC MARK

KEEP UP WITH CHINESE SAFETY AND EMC STANDARDS

MAKE CHINA COMPULSORY CERTIFICATION A PRIORITY

A China Compulsory Certification (CCC) mark is your passport to the lucrative and potentially vast Chinese marketplace. All electrical goods listed in the CCC catalogue, whether manufactured within China or imported from abroad for sale or use in the country must obtain a CCC mark.

As a notified and accredited certification body SGS can help.

CCC MARK

Mandatory since 2002 the CCC mark must be acquired, in advance, for defined electrical products entering the Chinese market. CCC is a quality and safety mark which applies to electrical, electronic and many other products sold in China.

SGS operates one of the largest Safety and EMC testing and certification networks in the world. We can provide CCC mark certification for the products which fall into the categories below:

- Video/Audio equipment
- Information technology equipment
- Household and similar appliances
- Lighting apparatus
- Switches for circuits, installation protection or connection devices
- Low voltage electrical apparatus

TWO STANDARDS COMBINED

Since 2002 the CCC mark has replaced China's previous inspection schemes, CCIB and CCEE. In addition to quality and safety the CCC mark also requires products to undergo EMC testing.

ADD VALUE CQC

Manufacturers can also add value to products that do not fall within the CCC mark remit. China operates a voluntary product certification mark scheme -the China Quality Certification (CQC) mark. Currently covering some 500 products the CQC mark is processed and audited in exactly the same way as the CCC mark. Meeting the safety and quality test voluntarily will set your products apart from competitors, improve brand image and help you to better market products across China.

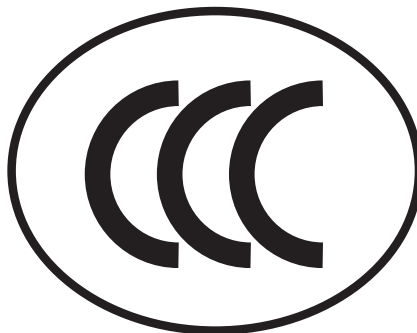

CCC MARK TEST METHODS

Unlike schemes elsewhere, manufacturers to the Chinese market cannot self-declare to the requirements of the CCC mark. All defined electrical products must be tested in China and a China Quality Certification Centre auditor must conduct the initial factory inspection. SGS has worked with China for many years. We developed a deep understanding of the regulations and built a longstanding relationship with the Quality Certification Centre to ensure a product's smooth progress to market.

WHY SGS?

SGS is the world's leading inspection, verification, testing and certification company:

- With more than 130 years experience in testing and verification SGS has unrivalled expertise in helping clients get products to market and using certification to access the widest possible audiences.
- SGS has been working in China for 20 years. With a deep understanding of the country's legislation and industries we have the knowledge and experience you need to ensure your products satisfy the relevant requirements.
- We have established a long-term relationship with CQC and CCC. Our experienced lab engineers work with CQC officials to assure the high quality of our CCC services..
- With 17 consumer testing offices across China we can provide clients with unrivalled access to testing facilities. Our tailor-made solutions are customized to meet local, regional and national regulations. With local staff who understand the culture and language we can share information and translate summarized local regulations in English.
- Whatever, and wherever, your market we can provide you with fast and effective one-stop testing and certification service.
