ISO 50001:2018

How can you continuously improve energy efficiency?

Enhance your energy management system

ISO 5001:2018 enables organizations to follow a systematic approach in achieving continual improvement of energy performance, including energy efficiency, consumption and mitigating negative environmental impacts.

Every year, the number of organizations seeking to be ISO 5001 certified increases. In 2016, there were 20,216 organizations seeking ISO 50001 certification.

- 2016: 20,216
- 2015: 11,985
- 2014: 6,778
- 2013: 4,826
- 2012: 2,336

Alternative energy sources are needed to sustain economic growth and lessen negative environmental impacts.

- Heat wave
- Blizzard
- Heavy rainfall
- Droughts
- Tropical Cyclones
- Rise in sea levels
- Sea ice coverage depletion
- Increase in ocean acidity
- Increase in concentration of atmospheric CO2

ISO 50001 is a key step to:

- Improving risk management
- Achieving continual operational improvement
- Cutting operational costs
- Reducing greenhouse gas emissions and other negative environmental impacts
- Staying competitive in the marketplace

5 Tips to start transitioning to ISO 5001:2018

- Learn more about the new version of the standard
- Conduct a gap analysis and develop an implementation plan
- Have concerned parties undergo appropriate training regarding the new standard
- Discuss with SGS, your trusted certification body about transitioning to the new version
- Update the organization’s existing EnMS to meet the new requirements

Earth’s temperature in 2017 ranked as the 2nd warmest since 1880, causing an increase in extreme climate events such as:

- Heat wave
- Blizzard
- Heavy rainfall
- Droughts
- Tropical Cyclones
- Rise in sea levels
- Sea ice coverage depletion
- Increase in ocean acidity
- Increase in concentration of atmospheric CO2
