SGS ENVIRONMENTAL SERVICES

With the degradation of ecosystems giving increasing cause for concern, many countries are turning their attention to environmental issues. While Governments enforce relevant regulations, industries develop their own code of conduct, limit the use of chemicals and overhaul manufacturing operations. To help their clients, SGS has developed a set of assessment tools and consulting services based on the GSCP environmental reference principles.
With the degradation of ecosystems, it is no longer optional but vital for companies to monitor their environmental impacts and control their consequences in the global supply chain.

SGS has developed a set of assessment tools and consulting services based on the GSCP environmental reference principles which include most relevant topics and are applicable to a wide range of industries.

These help companies to evaluate their factories’ environmental compliance level and identify room for further improvement.

**SCOPE**
- Environmental Permits
- Management System
- Pollution Control and Resource Conservation
  - Water Use
  - Waste Water
  - Gas
  - Waste Management
  - Hazardous Substances
  - Noise

- Nuisance

**SGS SERVICES**

1. **Environmental Conformity Assessment**
   - The environmental assessment focuses on legal requirements (when existing) and minimal environmental safety rules and good practice;
   - The assessment gives a clear picture of the environmental conformity level of the facility you are working with;
   - This service helps buyers answer this question: Do I take a risk by working with this supplier?

2. **Full Scope Assessment**
   - It’s a comprehensive environmental management system assessment
   - Supplier’s current situation is verified against a defined set of audit criteria that not only focus on conformity but also on the factory’s capacity to implement actions to improve its procedure in order to achieve environmental excellence.

3. **Environmental Improvement Services**
   - They support manufacturers with onsite coaching and consulting to help implementing an environmental management system and reducing the environmental impacts of production processes.

**BENEFITS**

On the other hand, the benefits in supporting the suppliers improve their environmental impacts enable the effective implementation of a risk management strategy.
