

«With 17 consumer testing offices across China we provide clients with unrivalled access to testing facilities.

Our tailor-made solutions are customized to meet local, regional and national regulations.

With local staff who understand the culture and language we can share information in English and translate summarised local regulations, too.»

## KEEP UP WITH CHINESE SAFETY & EMC STANDARDS

### MAKE CHINA COMPULSORY CERTIFICATION A PRIORITY

A China Compulsory Certification (CCC) mark is your passport to the lucrative and potentially vast Chinese marketplace. All electrical goods listed in the CCC catalogue, whether manufactured within China or imported from abroad for sale or use in the country, must obtain a CCC mark.

As a notified and accredited certification body SGS will support you.

#### CCC MARK

Mandatory since 2002 the CCC mark must be acquired in advance for defined electrical products entering the Chinese market. CCC is a quality and safety mark which applies to electrical, electronic and many other products sold in China.

SGS operates one of the largest Safety and EMC testing and certification networks in the world. We provide CCC mark certification for the products which fall into the categories:

- Video/Audio equipment
- Information technology equipment
- Household and similar appliances
- Lighting apparatus
- Telecommunications terminal equipment

#### TWO STANDARDS COMBINED

Since 2002 the CCC mark has replaced China's previous inspection schemes CCIB and CCEE. In addition to quality and safety the CCC mark also requires products to undergo EMC testing.

#### ADD VALUE CQC

Manufacturers can also add value to products that do not fall within the CCC mark remit. China operates a voluntary product certification mark scheme - the China Quality Certification (CQC) mark. Currently covering some 500 products, the CQC mark is processed and audited in exactly the same way as the CCC mark. Meeting the safety and quality test voluntarily will set your products apart from competitors, improve brand image and support you to better market products across China.

## CCC MARK TEST METHODS

Unlike schemes elsewhere, manufacturers to the Chinese market cannot self-declare to the requirements of the CCC mark. All defined electrical products must be tested in CQC accredited CCC testing laboratories in China and a China Quality Certification Centre auditor must conduct the initial factory inspection. SGS has worked with China for many years. We developed a deep understanding of the regulations and built a longstanding relationship with the China Quality Certification Centre to ensure a product's smooth progress to market.

## A GLOBAL REACH WITH A LOCAL TOUCH

With a presence in nearly every single region around the globe, our experts speak the local language, understand the culture of the local market and operate globally in a consistent, reliable and cost-effective manner.

With more than 130 years experience in testing and verification SGS has unrivalled expertise in supporting clients get products to market and using certification to access the widest possible audiences.
