

TURKEY

ANALYTICAL SERVICES

Quality inspection is carried out depending on the commodity involved, in the factory or store, on quay, in the sampling room or in a laboratory. Such interventions can cover every aspect of the condition of the goods.

Our agricultural laboratory in Istanbul, performs physical and chemical analysis of commodities in accordance with international and local standards for a wide range of agricultural products.

Staffed by experienced analysts, this laboratory is accredited to the following schemes:

- FOSFA and GAFTA, approved analyst.
- Approved subcontractor laboratory for the Turkish Standards Institute (TSE).

To meet growing demand the Istanbul laboratory moved to larger premises in early 2013 and now has a higher capacity than before.

SERVICES FOR FRESH FRUIT AND VEGETABLES

Quality and quantity inspections, as well as pesticide monitoring of fresh produce by our inspectors facilitates trade for exporters and importers. We have inspection facilities in the south and west of the country, where the majority of fresh produce is imported/exported.

Recently, quality and compliance regulations for fresh produce have become increasingly important at every step. We provide clients with timely and accurate information for these fragile commodities, thereby providing a stable and reliable supply chain.

In addition to our inspection of the fresh produce imported to Turkey we verify the quality of thousands of tons of fresh produce shipped to EU and Russia annually.

SEED AND CROP SERVICES

The latest addition to our range of services is Contract Research Services for Agrochemical Registrations, making us the first international company in this market.
