

SGS MYANMAR, OVER TWO DECADES ALREADY

The priority of fumigation service in SGS Myanmar is for cargo arrival at destination without any live infestation. Safety of fumigators and environment are essential requirements for the fumigation services.

To fulfill these requirements, SGS Myanmar's fumigators were trained by our own international experts and the Myanmar Agricultural Service, a department of Ministry of Agricultural regulating pest control and fumigation services.

SGS Myanmar's fumigation service started with pre-shipment fumigation of beans and pulses at supplier's warehouses in 1992 in Myanmar. Nowadays our scope includes onboard fumigation of all agricultural products, cargo fumigation in containers and extensive pest management services in line with market demand.

SGS Myanmar has developed fumigation services to facilitate clients a smooth export and best practice services, satisfying the client's requests and needs with reasonable prices. Both Aluminum Phosphine and Methylbromide are used for fumigation.

Onboard, warehouse and container fumigation are being provided for all agricultural products in Myanmar. In addition, SGS Myanmar is the only independent third party providing gas free testing services.

We provide the following services related to Pest Management Services:

- Fogging
- Residual Spraying
- Rodent Baiting
- Anti-Termite treatment

To protect wood against insect and termite damage, we also provide biocide injection before and after construction. To facilitate the export, we support our client to obtain Phytosanitary certification from the Ministry of Agriculture. All our interventions related to container fumigation are compliant with ISPM 15 regulations and are carried out together with the Phytosanitary Department, Ministry of Agriculture in Myanmar.

SGS Myanmar's Fumigation department is not only providing services, but also advises clients on using the correct dosage, applying the best practice for a specific destination and providing expert information. In order to leverage the benefit of our clients, SGS is providing package services like Quality and Quantity Inspection, Fumigation and organizing Phytosanitary Certificates.
