

# ISCC CFC CERTIFICATION

## What is ISCC CFC?

International Sustainability Carbon Certification (ISCC) Carbon Footprint Certification (CFC) is a voluntary scheme that verifies greenhouse gas (GHG) emissions associated with a product.

It focuses on a product's impact on climate change, indicating the global warming potential (GWP) in grams, kilograms or tons of carbon dioxide equivalent (CO<sub>2</sub>e). This aims to make carbon footprint reporting clear and consistent through a simple, understandable and cross-standard approach.

ISCC CFC supports innovative solutions that help lower emissions, including carbon capture and storage (CCS), carbon capture and utilization (CCU), renewable energy, closed-loop systems that recycle materials and optimized production processes.

## Is ISCC CFC flexible and open?

As a voluntary certification scheme, ISCC CFC covers a range of products. This allows for an adaptable, product-specific assessment that reflects the actual emissions of each case, encouraging transparency, improvement and innovation.

## Is benchmarking and reference values included?

ISCC CFC is designed to calculate a precise and reliable product carbon footprint (PCF). Benchmarks or reference values are not included, ensuring a focus on accurate, product-specific data and its emissions.

## What we offer

As the world's leading testing, inspection and certification company, with over 30 years of sustainability leadership, we can help you along the path to certification with an ISCC CFC audit.

We can provide:

- Audits globally
- Experienced auditors with an in-depth understanding of certification requirements
- Audits in combination with other standards
- Verification of GHG calculations
- Extensive experience and a strong reputation in the certification industry

SGS Academy also offers a range of sustainability [training courses](#), covering topics like the environment, energy, agriculture, food and ESG.

## Who is it for?

ISCC CFC is a sustainability certification for virtually any product and its production process. It considers the PCF of a defined product, not just emissions reductions or sustainable feedstocks.

## Key benefits

- Standardized carbon footprint data
- Enhance emissions management
- Stronger communication and accountability
- Optimize operations and environmental actions

## Quantify, verify, reduce and report emissions with ISCC CFC

As sustainability is complex and rapidly evolving, we hear organizations' concerns daily. Wherever you are, whatever your industry and ultimate sustainability aspirations, our [IMPACT NOW for sustainability](#) experts are ready to support you.

Combining our world-leading certification services with over 30 years of sustainability leadership, we help you move from complexity to clarity, and from advice to meaningful action.

ISCC CFC is an essential part of [IMPACT NOW](#).
