

# Nitrosamines Identification & Quantification

Health Inspired,  
Quality Driven.

Our scientific experts offer a scalable capacity to fulfill your needs, including, unrivalled expertise in the analysis of nitrosamine drug substance related impurities (NDSRIs) and sample shipment management from around the world.

**SGS**

## The nitrosamine challenge

Our team of experts has expanded the capabilities of our laboratory in Geneva, Switzerland, developing a coordinated analytical capability to identify, characterize and quantify all nitrosamine contaminants including the challenging nitrosamine drug substance related impurities (NDSRIs).

## Extensive experience in method development with mass spectrometry

We've created new robust and sensitive methods for nitrosamine(s) determination in pharmaceutical products by LC-MS/MS. These methods use either triple quadrupole or high mass resolution instruments, for complete accuracy and reliability.

## Sample Logistics

Using our preferred audited partners, we provide sample shipment management from clients' manufacturing sites to SGS laboratories all over the world.

## About SGS

Our global network of analytical testing, formulation, clinical research and clinical manufacturing solutions allow us to offer a wide range of integrated services and expertise across America, Europe and Asia-Pacific.
