

Coal, Coke and Petroleum Coke

Trusted.
Independent.
Committed.

SGS

Facilitating trade in the global minerals and metals supply chain.

Our global team of experts helps you to reduce risk, make informed decisions and ensure the integrity of coal, coke and petroleum coke.

Testing

Step towards creating a safe, high-quality supply chain with our renowned and unique, industry-leading depth and breadth of testing solutions. Operating from on-site and near-site, state-of-the-art laboratories, our services include proximate, ultimate, and the full range of coal, ash, and mineral analysis, coke strength & stability testing, rheology testing, analysis of met, steam coal, pet coke, and ash, hardgrove grindability index (HGI), and more.

Inspection

Working from the world's major ports, and mining locations, we aim to minimize commercial risk by quickly and accurately determining the physical properties of your commodities. Our experienced inspectors can provide pre-shipment inspection, damage survey, draft survey, and marine inspections, as well as loading & discharge supervision, quality & quantity inspection, and sampling.

Risk Management

Safeguard your commodities and ensure success within your operations. By working with the latest cutting-edge digital technologies, we blend innovation with customization to provide you with tailor-made solutions at every stage of the supply chain.

Market Intelligence

Gain a competitive advantage by leveraging our accurate and reliable market intelligence data. Our solutions provide crucial information to power success throughout every stage of the supply chain - while also revealing the quality and potential opportunities of local mineral and metal commodities.

SGS is the world leader in coal, coke, and petroleum coke testing, inspection, and risk management.

No matter where your commodities come from, or where they're going to, we will be by your side every step of the way.
