

Fertilizers, Raw Materials & Dry Chemicals

Trusted.
Independent.
Committed.

We are the global leader of quality and quantity testing services for the fertilizer industry. Our fertilizer capabilities apply to a wide range of commodities including all the traditional macro/micro organic and non-organic fertilizers, and more. Whatever your involvement in the fertilizer business, our global network and technical expertise can support your activities.

Testing

In our laboratories, we utilize the latest in instrumental methodology, as well as classical wet chemistry methods. We provide qualitative and quantitative, major and trace elements analysis, as well as physical analysis – all performed according to the international recognized standards (ISO, EN, AOAC, etc).

In addition, we also provide on-site laboratory solutions, commercial analysis, proficiency testing programs, and due diligence reviews.

Inspection

Working from the world's major ports, mining, and refining locations, we aim to minimize commercial risk by quickly and accurately determining the physical properties of your commodities.

Our array of services include:

- Draft surveys
- Weight verification
- Cargo inspections
- On-hire-off-hire survey
- Manual sampling
- and more.

Risk Management

Our network of internationally acclaimed risk management specialists work with the latest state-of-the-art digital technologies to manage risk at every stage of the supply chain; safeguarding your commodities and ensuring success of your operations.

We also empower the industry to shape more sustainable operations. At the core of our offerings is a fusion of cutting-edge digital technologies and expert guidance. This allows you to effectively highlight your continued commitment to your ESG practices to consumers and stakeholders.
