The knowledge customer solution approach

Organizations today are met with a variety of operational and business challenges. External forces, like competitors and regulatory bodies, also add a secondary level of pressures that must be anticipated. Additionally, both B2B and B2C firms are experiencing a large influx of customer data, across multiple touchpoints. The dividing factor between those who are successful and those who are not, is how they analyze and use that data for business enhancement. At SGS, we have developed a variety of solutions to not only meet these needs, but establish more efficient and profitable ways of working. Using our 140 years of experience and operational data set, we partner with clients to gain intelligent insights into their current business functions while simultaneously strategizing for the future. To meet the needs of our current customers and provide effective and modern solutions to current and future business issues, we offer three pillars of insights driven, customizable products and solutions.

The business enhancement platform

For decades, SGS has been known as the global leader in certification, working with clients in virtually any sector. This deep and broad experience in quality control management, regulatory compliance, and training has resulted in a staggering array of data points across industries. Utilizing this dataset, we have evolved our service offerings to include Business Enhancement—the process of transformation that improves or increases the value of an organization's people, processes, product or service. Our Business Enhancement solutions offer the most up to date, practical insights to help you achieve your goals and ultimately BE the Benchmark.

Transforming people and businesses with SGS Academy Hong Kong

In today's fast moving market sectors, keeping you up to date with industry best practice, technical standards and current legal and regulatory compliance expectations throughout your value chain is an integral part of professional development; and ensures you and your team that have the skills to achieve your goals effectively.

With the help from SGS Academy, you and your business can gain the knowledge you need to continually adapt the way you work, to keep ahead of market developments and to enable you to continuously develop all aspects of your career and organisation.

Customized training to your exact requirements

Our experts deliver high quality professional training across a wide range of subjects and industries and provide detailed information and guidance relevant to all stages of your value chain. Our courses cover quality and safety improvement, compliance, sustainability, the safety of people, products and systems, risk management, leadership and management development and brand protection, falling into three main areas:

Management systems and certification training

SGS Academy training gives you a complete understanding of the essential requirements of management systems and standards. Whether you are a lead auditor or executive, interested in a particular ISO Standard or management system, we deliver courses that suit all audiences from foundation and awareness training to accredited Lead Auditor courses that meet Certification Body training criteria and requirements. We also provide training on non–accredited management systems processes.

Compliance training

Expert information and guidance is essential to ensure you and your organisation adhere to the necessary duty-of-care, laws, regulations, standards and policies. Our solutions give you the knowledge you need to feel confident in advising those around you and in evaluating that you are in full compliance with health and safety, sustainability, integrity, environmental guidelines and regulations.

Management, leadership and soft skills training

Developing talent is a critical component of continuous improvement. Our courses are designed to help you and your team work more effectively internally and externally. By enhancing your management and leadership skills, developing your strategic thinking and moving your communications skills to the next level, you are able to transform your capabilities and align your capabilities and aligning yourself to the needs of your organisation, your supply chain and your customers.

Delivery method

We all approach training in different ways and have to fit it in our professional development around our day-to-day responsibilities. With this in mind, our training solutions are offered in a variety of delivery formats so that you can choose those that are best suited to your individual requirements and the needs of your organisation. Our experts deliver face-to-face training in the form of public courses where you can join with your industry peers and through in-house courses designed to meet the specific needs of your organisation.

Public courses

Joining our face—to—face public courses gives you the opportunity to meet with peers from related industries and discuss course topics with others who have identified the same types of issues. As a result, you can share and gain best practical practice and knowledge, not only from our SGS experts, but also from those in similar organizational roles. Throughout all discussions with our experienced and knowledgeable tutors help you to evaluate your insights so you are subsequently able to make considered decisions when approaching strategic changes within your business. Public courses are arranged on fixed dates, please visit https://learning.sgs.com/hk

In-house courses

Running a standard or customised course at your premises allows you to shape the message and style of the presentation to suit the culture of your organisation. It is the most convenient and costeffective solution if you wish to train a number of staff in the same location, or when confidentiality is an issue. Once we have agreed the dates and location for your training course, our experts work with you to identify and evaluate your learning objectives and to customise the course content to ensure they are met.

With respect to being a leader in professional training, here at SGS Academy we accumulate numerous years of worldwide experience and international knowledge to allow us to provide effective and fruitful learning and development opportunities for our members /clients.

Would you like to join our SGS Academy as an exclusive SGS Learning Member. For any further enquiries, please contact us at 2765 3530 or hk.academy@sgs.com

E-learning courses

If you are looking for a flexible learning solution that you or those in your organisation can fit around your schedule, our e-learning training offers an ideal option. Being delivered quickly and effectively through our Learning Management System or yours, our global e-learning courses are easily accessible. Anyone taking our courses can simply access the content at anytime, anywhere. Our experts have prepared a portfolio of e-learning courses for your immediate use, or can work with you to prepare e-learning courses tailored to your specific needs. For any courses you or those in your organisation study, progress information can be simply tracked and monitored. Talk to us about how we can integrate your e-learning through our global Learning Management System.

The global SGS academy

The SGS Academy network spans the whole world, delivering courses in multiple languages in multiple countries. Our culturally sensitive content and approach reflect the SGS global expertise and give you the opportunity to achieve your learning goals wherever you are.

Train with SGS academy and keep ahead of the competition

SGS has trained professionals from both the biggest companies and government organisations in the world. Our innovative learning and development solutions are designed to help organisations and individuals improve personal competence and skills - core enablers of sustainable business development and competitive advantage.

We are committed to delivering market-leading solutions through using the latest technologies available.

Each global SGS Academy location is a centre of excellence for course design and professionally focused business training adapted to your needs and those of your organisation. We share our knowledge and experience globally across SGS and tailor it locally so you get the best training and expertise along with the most up-to-date industry information. Before we embark on any training programme, our experts work with you to define your organisational and personal learning goals so that we can support you in reaching them throughout the process.

Many of our certification training courses have been designed to the specifications of international standards and accredited bodies, ensuring high quality courses and the achievement of recognised levels of expertise. To support the breadth of our training, SGS Academy also delivers nonaccredited and customised courses to meet specific market and customer needs.

We understand training needs to be flexible to fit around busy professional and personal lives. To help with this, many of our courses are flexible and can be studied around other commitments. If you need further assistance in understanding which delivery method best for you, our local SGS Academy teams are available to advise you. They can also answer your enquiries and enrolment requests and help to make the registration process as simple and easy as possible.

SGS has trained professionals from both the biggest companies and government organizations in the world. Our innovative learning and development solutions are designed to help organizations and individuals improve personal competence and skills – core enablers of sustainable business development and competitive advantage.

Quality, environment & health

ISO 9001 – Quality Management System (QMS)

ISO 9001 Quality Management System certification enables you to stand out from the competition. It demonstrates your commitment to meeting the highest standards of quality and customer satisfaction and supports you in continuously improving your quality management systems. ISO 9001 enhances the reliability of your operations, increases your performance and potentially has a positive impact on your bottom line.

ISO 14001 – Environmental Management Systems (EMS)

ISO 14001 Environmental Management Systems (EMS) certification helps you stand out from the competition. It shows existing and potential customers your commitment to complying with environmental standards and supports you in reducing the environmental impact of daily operations. ISO 14001 enhances the reliability of your operations, increases your performance and brings economic benefits.

ISO 45001 – Occupational Health And Safety Management System (OHSMS)

ISO 45001 certification shows a commitment to occupational health and safety, and a clear and proactive consideration towards your employees.

It helps you stand out from the competition and supports you in continuously improving your health and safety management systems. The standard promotes a safe and healthy working environment by providing a framework that allows organizations to identify and reduce their occupational health and safety risks, reduce potential for accidents, aid legislative compliance and improve overall performance.

Integrated management systems certification

Integrated Management Systems enable more effective performance. All organisations are under pressure to demonstrate management systems that satisfy various stakeholder demands, whether they are focused on quality, the environment, IT security or health and safety. Management systems in compliance with international standards could be simultaneously certified through an integrated audit including:

- ISO 9001 Quality Management Systems
- ISO 14001 Environmental Management Systems
- ISO 45001 Occupational Health & Safety Management Systems

Energy & carbon

ISO 50001 – Energy Management Systems (EnMS)

ISO 50001 Energy Management Systems certification enables you to demonstrate your commitment to treating the environment responsibly, ensuring energy efficiency across all your activities. By having effective energy and environmental management systems, you can give your stakeholders the assurances they demand. By establishing the systems and processes necessary to improve energy performance, including energy efficiency, use, consumption and intensity, you can reduce your energy costs, GHG emissions and other environmental impacts.

ISO 14067 - Carbon Footprint

ISO 14067 Carbon Footprint verification enables you to demonstrate your environmental responsibility, stand out from the competition and show existing and potential customers proof of your commitment. Your organization can demonstrate its commitment to reducing the impact of its daily operations on the environment with carbon footprint analysis by meeting the ISO 14067 standard.

ISO 14064 – Greenhouse Gas **Accounting and Verification**

ISO 14064 standard provides a framework of standardised principles and approaches for the preparation and production of GHG inventories. This provides governments and industry with an integrated set of accountable and verifiable tools for best practice in quantification and reporting of emissions and emission reductions.

The overall aim is to increase consistency and transparency in GHG accounting and reporting by helping to support programs focused on reducing greenhouse gas emissions and emissions trading.

BIM Project Management

BIM Project Management from SGS – provides the construction industry with an effective methodology and protocol for managing the BIM process. The revolutionary Building Information Modeling (BIM) platform is heralded as the next generation of computer aided design and construction. Managing the quality of the BIM process is becoming increasingly vital to any construction project. However, if used without the necessary planning or experience, BIM implementation can cause as many complications as the problems it solves. That is where we can help, offering design and construction teams practical BIM project management, implementation strategy and transitional training.

BIM MANAGER COURSE

BIM COORDINATOR COURSE 建造業議會認證建築信息模擬經理課程 建造業議會認證建築信息模擬協調員課程

Food safety

ISO 22000 - Food Safety **Management Systems**

ISO 22000 is an international certification standard that defines the requirements for effective food safety management systems. It can be used by organizations throughout the supply chain - from farmers and ingredient suppliers, to food services, processors, transportation and storage companies, retailers and packaging companies. ISO 22000 enables you to demonstrate strong commitment to food safety when bidding for international contracts or expanding locally to accommodate new business.

BRC – British Retail Consortium

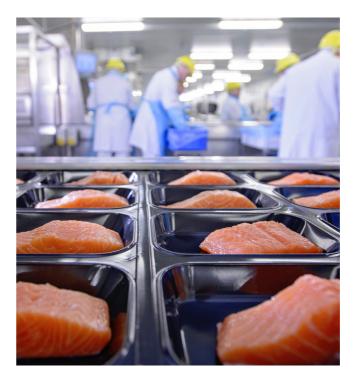

The British Retail Consortium (BRC) is a UK trade organisation that represents the interests of UK retailers. Setting out the requirements for the supply of safe and legal consumer products of consistent quality, this standard covers the vast majority of non-food products and identifies how to determine the product group into which a product should be placed, and defines a wide range of audit requirements. Meeting the requirements of the BRC's Global Standards demonstrates a company's competence in maintaining product safety, quality and legality.

HACCP – Hazard Analysis Critical Control Point

Hazard Analysis and Critical Control Points (HACCP) is an international standard defining the requirements of a safe food management system. The HACCP system helps organisations focus on the hazards that affect food safety / food hygiene and the systematic identification, setting and implementation of critical control limits at critical control points during the food production process.

US FSMA - Food Safety Modernization Act

The US Food and Drug Administration (FDA) Food Safety Modernization Act (FSMA) shifts the industry's focus away from responding to contamination events. Such a step-change requires the updating and alignment of policies, processes and their implementation, to meet the FDA's seven foundational rules for FSMA compliance. If you have food businesses with the US, it must comply with the FSMA.

Medical device

ISO 13485 – Quality Management Systems For Medical Devices

ISO 13485 is a standard specific to Medical Device Quality Management System that supplements the ISO 9001 standard. Some of the additional requirements relate to design and process controls, special processes, traceability, record retention and regulatory actions, which are particularly critical to the medical devices industry. ISO 13485 is applicable to all manufacturers and providers of medical devices, components, contract services and distributors of medical devices.

ISO 14971 – Medical Device Risk Management

ISO 14971 is a standard specific to risk management for the Medical Devices industry. ISO 14971 enables you to demonstrate how risk management applies to the product lifecycle and how to effectively implement the objectives of risk management process.

LRP (Local Responsible Person) – applicable to Hong Kong

There is increasing concern of local adverse incidents and complaints related to medical devices, which had aroused the general public awareness to the functionalities and reliability of the medical devices.

The Hong Kong Government is examining the safety and health risk of the medical devices and planning introduce a new legislation to deal with the issue of control over the registration. To enable useful preparation for the future regulatory requirements on medical devices, SGS Hong Kong launches Certified Professional for Medical Device Local Responsible Person (LRP) Companies in collaboration with our regulatory specialists.

RAQA (Regulatory Affairs & Quality Assurance)

SGS Hong Kong recognizes the increasing future demands for the ever–changing regulatory and quality landscape. SGS Hong Kong launches Professional Certificate in Medical Device Regulatory Affairs & Quality Assurance Programme in collaboration with regulatory specialists to address medical device regulations in Asia, European and International markets. The course consists of 9 modules designed to address the knowledge requirements for regulatory affairs & quality assurance specialists described the medical device regulations of multi–countries, including the E.U., the United States as well as local regulations. Hong Kong launches Certified Professional for Medical Device Local Responsible Person (LRP) Companies in collaboration with our regulatory specialists.

Cosmetics & pharmaceuticals

ISO 22716 – Good Manufacturing Practices (GMP)

ISO 22716 is the guidance for Good Manufacturing Practices (GMP) for the cosmetics manufacturing industry and describes the basic principles for how to apply GMP in a facility that produces finished cosmetic product. Good Manufacturing Practices (GMP) provides a comprehensive approach for a quality management system for those engaged in the manufacturing, packaging, testing, storage, and transportation of cosmetic finished products.

GDP (Good Distribution Practices)

Good Distribution Practices (GDP) is a quality system for warehouse and distribution centers dedicated for medicines. Internationally accepted pharmaceutical GDP regulations stipulate that distributors of pharmaceutical products must align their operations with the standards. The scheme ensures that consistent quality management systems are in place throughout your entire supply chain, from the early delivery of raw materials to the manufacturing plants, to the final shipment of finished drugs to the end user.

PIC/S Good Manufacturing Practice (GMP)

The Pharmaceutical Inspection Co-operation Scheme (PIC/S) was firstly established in 1995 and is well recognized as an informal co-operative arrangement between Regulatory Authorities of Good Manufacturing Practice (GMP) among different countries which aimed to harmonize the inspection procedures worldwide. Global markets and international manufacture and supply of both raw materials and active pharmaceutical ingredients increase the complexity of supply chains. Addressing GMP regulations effectively across international borders is easily facilitated by our network of local experts.

PIC/S GMP – For Quality Risk Management in Pharmaceutical Industry

The safety of pharmaceutical products of getting an of increasing concern, as risks emerging from everywhere in the manufacturing, packaging, warehousing and distribution processes. The risk management beginning with pharmaceutical raw materials to finished products must be assured. SGS Academy is committed to the local promotion of GMP and GDP combining the best practice of other countries for customers to achieve the continuous improvement.

PIC/S GMP – for secondary packaging in pharmaceutical industry

Secondary Packaging is a manufacturing step involving the labelling, re-labelling, cartoning, re-cartoning or adding additional information (including inserts) to pharmaceutical products, which are already enclosed in the container to be sold or supplied.

CSR & Social system

ISO 26000 - Social Responsibility

The standard outlines the best practice and guidance for organizations seeking to incorporate them into their operations and across their supplier network. ISO 26000 gives you ability to attract and retain workers, members, customers, clients and users. It enables the maintenance of keeping an appropriate level of employee's morale, commitment and productivity.

SA 8000 - Social Accountability

SA 8000 is an international certification standard that encourages organizations to develop, maintain and apply socially acceptable practices in the workplace. Created by Social Accountability International (SAI), an affiliate of the Council on Economic Priorities, SA8000 is viewed as the most globally applicable workplace standard. It can be assessed in any size facility and industry sector. SA 8000 reinforces your employees' ongoing commitment and motivation, thus positively affecting the quality of your services and products.

Global Reporting Initiative (GRI)

The current climate of international and local business is requiring companies to be more transparent and to consider the full impact of their activities and policies. Following the surge in production of ESG/CSR/Sustainability Reports, there is now an intensifying pressure for independent verification of these reports against the most recognised international standards such as Global Reporting Initiative (GRI).

Environmental, Social and Governance (ESG)

The number of ESG Reporting is expected to increase rapidly with the Hong Kong Exchanges and Clearing Limited (HKEx) upgraded the ESG Reporting Level from "voluntary" to "comply or explain" in December 2015. This requirement is effective for all the Hong Kong listed companies on or after the financial year of 1 January 2016. For the first–time ESG report writers or sustainability professionals, attending ESGrelated training can give them more in–depth ideas and knowledge on how to prepare an ESG Report requirements which fulfills and exceeds HKEx requirement.

Information technology

ISO 27001 – Information Security Management Systems

ISO 27001 enhances your organisation's credibility and demonstrates the integrity of your data and systems and your commitment to information security. It can also transform your organisation's culture, opening up new business opportunities with security—conscious customers, improving employee ethics and strengthening the notion of workplace confidentiality.

EuroCloud

SGS is the first accredited training provider for the EuroCloud Star Audit (ECSA) and assessor in Hong Kong. The purpose of the ECSA is to provide an accountable quality rating of Cloud Services. Unlike wellknown classic IT related certifications such as ISO 27001/27002 and ISAE3402 (formerly SAS70), the ECSA program takes the Cloud Service itself into the scope within the assessment of all relevant areas to address the key concerns of the cloud service cases.

GDPF

The General Data Protection Regulation (GDPR) protects people by defining the processing of personal data as a fundamental right. The implementation of GDPR is an important step forward that enables individual privacy rights. It is a complex regulation that may require significant change in how you collect, process and manage data from people all over the world.

ISO 22301 – Business Continuity Management

Most organizations will at some point be faced with having to respond to an incident that may disrupt or threaten the day—to—day operations of their business. ISO 22301 certification will help improve the way that any business manages this eventuality. It ensures a planned effective business continuity management (BCM) system in place, enabling you to respond effectively to any disruption.

Printing

FSC (Forest Stewardship Council) and PEFC (Programme For The Endorsement of Forest Certification Schemes)

SGS is a trusted partner to organizations worldwide for solutions across the forests and wood supply chains. We provide independent assessment, certification and training of forest management activities in accordance with the requirements of the Forest Stewardship Council (FSC) and the Programme for Endorsed Forest Certification Scheme (PEFC). Under the definition for the FSC standard definition, the CoC standard verifies products from certified forests that are not mixed with products from uncertified forests at any point in the supply–chain. PEFC Chain of Custody certification is essential for companies to demonstrate ethical business behavior and make responsible purchasing decisions.

Logistics

Authorized Economic Operator (AEO)

Announced in 2012, the Hong Kong Authorized Economic Operator Programme (HK AEO Programme) hasbeen officially launched. It is a customs—business partnership, which aims at strengthening international supply chain security. It is administered by the Customs & Excise Department (C&ED) through an open and voluntary certification program.

ISO 28000 Supply Chain Security Management Systems

ISO 28000 specifies the requirements for a supply chain security management system, linking security management to many other aspects of business management. These include all activities controlled or influenced by organizations that place impact on supply chain security, including transportation of these goods along the supply chain.

Management process improvement

Six Sigma Green/Black Belt

Many organizations are facing various high pressures on how to increase revenue, profit margin, and reducing the overheads and costs. Six Sigma is a powerful tool to improve the efficiency and effectiveness of the operations of organizations. Six Sigma tools combine all the cost reduction tools and methods to improve productivity and quality, and reduce cost radically. It also can empower staff to achieve companywide strategies and objectives. Successfully implementing Six Sigma program would result in positive impacts that included revenue rise, cost reduction, smart & smooth operation and better collaboration.

5-S Lead Auditor

5–S denotes: Structurize, Systematize, Sanitize, Standardize & Self–Discipline. The 5–S based on Lead Auditor Training is designed to train the relevant skills and knowledge to carry out the audits of the 5–S Principles and assess its use by organizations to build a culture of continuous improvement, while maintaining a quality management environment.

Business soft skills

Having over a century of experience in operating businesses around the globe, SGS Academy shares our knowledge with clients in every way they need, including business soft skills. To enhance interaction with others at work, no matter what level of one's qualification and technical expertise attainted, it is the key to stay competitive and sustainable in today's multi-polar world – human-centric against technology-centric.

Leading people

When it comes to driving your business successfully and sustaining the corporate development, an effective management and an agile leadership are critical. We offer a series of comprehensive leadership development programs meeting the needs of three hierarchical levels of leaders: junior, middle and senior leaders. The programs nurture leaders to tackle business challenges and develop best practices in achieving business and organizational goals.

Customer services and selling skills

At the forefront of a business, Sales and Customer Service professionals are extremely important to any business success. Being able to strategically satisfy the customer needs and assure their loyalty to a business in the long run is always the target to be achieved among those professionals. We adopt "ISO 10002 Customer Satisfaction & Complaints Handling" in our program, which aims at fostering clients' connection with their customers in a highly systematic and international professional way.

Design thinking and innovation

Design thinking refers to having a creative customer centric mind—set and tools to continuously surpass market competition. With "CEN/TS 16555 Innovation Management Systems" as a framework, our programs combine innovation and psychology to facilitate the creation of impactful products and services, which is a key to revitalizing your business in today's ever—changing world.
