

PROJECT MONITORING

EXPERT SUPERVISION, CONSULTANCY AND ASSISTANCE

GLOBAL PROJECTS - LOCAL EXPERTISE

Globalisation and exceeding price and quality pressure increasingly force companies to outsource activities and contract new suppliers - often based in unknown countries far away. Although using cheaper sources, clients request high quality, short delivery times, reliability and dependability. This situation needs continuous and sophisticated on-site supervision to monitor progress and quality.

SGS PROJECT MONITORING

The oil producer in Nigeria, the electrical power company in Saudi Arabia, the engineering contractor in Japan, the cement plant in Vietnam, as well as banks and investors in Europe - they seem to be worlds apart, but they all must be certain that their investments are used for projects that meet established standards of quality and safety, are delivered within shortest time and guarantee a return of investment.

Backed by a wide ranging worldwide network of over 1,250 offices in more than 140 countries, SGS performs comprehensive and most effective Project Monitoring services. We are able to offer on-site visits with local personnel, providing an exact status report about the respective situation and the applied quality within shortest time.

We can help to coordinate the project by providing different specialists with extensive experience and expertise.

WANT TO KNOW THE EXACT STATUS OF YOUR TRANSNATIONAL PROJECT – EVERYTIME AND EVERYWHERE?

REDUCING RISKS

While going abroad is always risky, the risk can be minimised by permanently monitoring the project through an independent consultant on-site.

Possible problems will be detected and reported at an early stage in order to assure quality and just-in-time deliveries.

Although projects may be situated in different countries, SGS always speaks the client's language. Communication is always done with the local office and one dedicated project coordinator assists the client as first point of contact in supervising the project.

SCOPE OF SERVICES

Aiming at minimising our clients' risk by providing them with independent expertise, opinions and advice, SGS offers

- Dedicated project coordination
- Worldwide pool of inspectors
- Project specialists on site clearable on man-day basis
